# New Technology Solutions Perfect For Education

Cables To Go makes connectivity in the classroom simple. We specialise in unique wireless and cabling products that save time and money when installing PC and AV cables in the classroom.

## RapidRun®

Our premiere Classroom solution, RapidRun is the most complete audio/video cabling system – built to save installation time, accommodate changes, and reduce the likelihood of return service calls due to faulty field terminations. This revolutionary system pioneered a Break-Away Flying Lead, providing the reliability of a factory termination in the field.

Putting an end to restrictive cabling and time-consuming installation, the genius behind RapidRun starts with the Runner – the main base cable that runs through walls, rooms and fixtures. To expand its flexibility, multiple signal types can be supported over your choice of Runner cable – such as VGA, Composite Video, S-Video, Component Video, or HDMI™ and DVI. Just select the Flying Leads that are right for your A/V application, connect the Break-Away to the Runner and with a twist, your termination is complete.

## Ideal For:

Conduit applications  
Future upgrades

Premium-quality concerns  
Multiple signals and configurations

Contact your account manager today and let us help you determine which solution and products are the best fit for your next education bid.
