

TruLink® VGA Over Cat5e Video Extenders

Utilise inexpensive Cat5e cable to extend the distance of VGA video signals

The TruLink VGA Over Cat5e Video Extender System (VES) is a robust hardware solution that extends VGA signals up to 300 metres over a standard Cat5e unshielded twisted pair (UTP) cable and provides signal distribution to one or four externally mounted displays. With the TruLink VES, you can place your display across the room, on another floor, or in another building while your computer remains in a convenient location.

The TruLink VES consists of two basic components: A Transmitter Base Unit and a Receiver Remote Unit. The transmitter attaches to the computer via a standard VGA cable and offers an HD15 VGA port for local monitor attachment. The receiver attaches directly to the remote monitor(s) and to the transmitter via a standard Cat5e UTP cable.

Features:

- Extend your VGA signal up to 300 metres

Applications:

- Perfect for home or office video extension applications, including: Retail/business applications, digital signage applications, classroom/education applications and medical/healthcare applications

Item#	Description
89005	TruLink 1-Port VGA Over Cat5 Extender - Transmitter
89006	TruLink 4-Port VGA Over Cat5 Extender - Transmitter
89007	TruLink VGA Over Cat5 Extender - Receiver
