

TruLink® 6x2 Component Video + Stereo Audio + TOSLINK® Digital Audio Matrix Selector Switch

Route six different sources independently to two monitors

The TruLink 6x2 Component Matrix Selector Switch is the ultimate controller for high definition and progressive scan video sources. This selector routes any of six source devices to each TV/monitor or one source to both TV/monitors. Connect all your HDTV products including DVD players, satellite receivers, cable set-top boxes, or gaming systems, and use the remote control or front panel buttons to watch any picture on any two plasma, CRT, LCD or projection televisions with complete independence!

This matrix switch offers six component video inputs, six stereo audio inputs, and six optical digital audio TOSLINK inputs. It will switch all these inputs to either of the two outputs, with the audio following video. The matrix switch also comes with an infrared remote control that features discrete commands to make programming complex macros into your universal remote control system a snap. Compatible with all interlaced or progressive scan analog component video signals. Now you can take control of your system and watch what you want, where you want – with no compromises!
