

## TruLink® PC To TV Converter

Convert your computer's VGA video output signal to an S-Video or Composite video input for your monitor or TV

The TruLink PC To TV Converter uses a state of the art chipset technology to produce a high quality reproduction of your computer's video output on any TV or monitor utilizing standard s-video or composite video inputs. The converter accepts 640x480 pixels (VGA), 800x600 pixels (SVGA), and 1024x768 pixels (XGA) video signals from a PC, and converts them to NTSC or PAL signals that can be displayed on any standard TV or monitor.

Simple to install, this converter is ideal for viewing slide presentations, browsing the web, PC gaming, and viewing pictures or movies that are stored on your PC, streamed from the internet or played through the computer's DVD player. The unit supports NTSC/NTSC-J/PAL systems with s-video and composite video outputs. A full-function remote allows users to zoom in/out, adjust vertical, adjust horizontal, flickering filter, color bars, and power. Powered from a standard USB port; two AAA batteries are required for the remote control.

### Features:

- Fully supports XGA resolution up to 1024x768
- Optional powering thru USB port or remote power adapter
- Full function Remote Control
- Input: (1) HD15 Female  
(1) USB A Male
- Output: (1) HD15 Female  
(1) MD4P S-Video Female
