

TruLink® TV to PC Converter

Convert s-video or composite video signals to high resolution VGA computer images

The TruLink TV to PC converter accepts s-video or composite video signals and converts them to VGA HD15 for high resolution image display on a PC monitor. By using this converter, you can display videos, cable, satellite TV or your video game console on a PC monitor. The converter uses the latest de-interlace chipset on the market which enables it to provide a truly high-quality picture. No software is required and connecting the device is simple. Within minutes you can be watching your DVD collection, satellite receiver or be playing video games on any PC.

The converter has a small footprint which makes it easy to fit in tight spaces and great for traveling. A built-in switch offers convenient switching between devices connected to the converter and your PC. Compatible with VGA, SVGA, XGA and SXGA resolution monitors.

Features:

- Next generation digital de-interlace chip technology provides high picture quality
- Multiple display resolution settings including VGA, SVGA, XGA, and SXGA
- Through video conversion, the adapter will allow you to maintain the ability to freeze the picture on your display (only applicable for displays with picture freeze feature).
- With the touch of one button you can easily switch between two devices
- Complete plug and play. No drivers or software required
- Free technical support and one year warranty

Applications:

- Perfect for home or office TV to PC converter applications, including: home theatre, gaming and video production
