

TruLink® 3x5 Component Video + Stereo Audio + TOSLINK® Digital Audio Matrix Selector Switch

Route three different sources independently to five monitors

The TruLink 3x5 Component Matrix Switch is the ultimate controller for high definition and progressive scan video sources. This selector routes any of three source devices to each TV/monitor, or one source to five TV/monitors. Connect all your HDTV products including DVD players, satellite receivers, cable set-top boxes, or gaming systems, and use the remote control or front panel buttons to watch any picture on any five plasma, CRT, LCD or projection televisions with complete independence!

This matrix switch offers three component video inputs, three stereo audio inputs and three optical digital audio TOSLINK inputs. It will switch all these inputs to any of five outputs, with the audio following video. The matrix switch also comes with an infrared remote control that features discrete commands to make programming complex macros into your universal remote control system a snap. Compatible with all interlaced or progressive scan analog component video signals. Now you can take control of your system and watch what you want where you want, and do it with no compromises!

Features:

- High quality audio and video output to as many as five A/V devices such as TV displays, A/V receivers or other A/V devices
- High quality video input support from up to three standard or high-definition sources
- Digital multi-channel support for up to three TOSLINK audio sources
- Standard left/right RCA stereo audio support for two-speaker systems
- Front panel push-buttons source selection with tri-color LED for quick input/output identification
- Slim line remote control
- Optional RS232 PC interface control for use with an automated remote control system
- Free technical support and one year warranty

Applications:

- Perfect for home or office component matrix applications, including: home theatre, gaming and video production
